NGOs Civilian Platform JAPAN : CEO HIROKAZU NISHIDA

●Petition purpose

Information disclosure is the essential principle of democratic development. In addition, because its secret range is vague, it is fraught with the risk the right of the nation knowing about pollution issues or medical issues and radioactive contamination. Though many nations object, the Diet decide, by majority, without convincing deep argument and rejecting our nation's wish, this profanes democracy. Without having even the convergence of the Nuclear Plant Accident by the former Tohoku Great Earthquake Disaster, for the northeastern people, nothing ends the compensation.

Children are not permitted to go out and play, and inhabitants of the highly-concentrated pollution zone of the neighborhood of power station can't return to their house anymore. In addition, the safety of the nuclear power generation technology is not confirmed at all. In such a big earthquake country like Japan, if an accident occurs once, the damage does not just remain in Japan, but in the sea and atmosphere. The influence is enlarged on a global scale and is irreparable with human intelligence.

However, as far as the Abe Administration is trying to operate nuclear power generation again and sell its technology to the other countries, such thinking of the current administration is unforgivable with irresponsibility. Even if we consider securing the nuke puke depository, as a business, it entails a large amount of cost and not much profit. So how can we look forward to a bright future? As for the procurement of the raw materials and the process of production, an on-site worker is subjected to health damage and danger. We must value the happiness of the on-site workers and think about the sacrifice of human life. It is vital for our descendants that we have an energy policy which gives top priority to life, and we must aim for a hopeful society, so that people 10,000 years from now will live in peace.

●We do not specify to whom we will submit the signature papers , but we are sure to bring an action against specific Official Secrets Act as a first bill and "de-nuclear power generation society" as a second bill in the International Citizen's Court". (Overseas campaign starts in March and plans deliberation court holding). As we cannot depend on the government and the judiciary, which can press the government for illegality, does not exist, we must withdraw this bill by our hands the citizens as we desire strongly to build the true democratic society.

●All people of 0 year or older , and of all nationalities are qualified to sign. Please assume the address for each person. No pencil, but only ball-point pencil. (a color does not matter)

Deadline_end of March. The signature paper may be downloaded and used freely. (<http://www.sonegoro.jp>)
